DETAILED ACTION

Summary

1. This is the initial Office action based on the 10/540582 application filed June 24, 2005.
2. Claims 1-15 are pending and have been fully considered.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 1 states “a method of activating a lower alcohol which comprises bringing the lower alcohol into contact with a substance activated by heating and pressurizing in the presence of wood vinegar and/or bamboo vinegar or with a material formed by processing the substance”, however the specification discloses on pg 5 and 6 “a method of activating substances and the substances activated by the method” and “to activate lower alcohols by using such an activated substance (the substance activated by such a method will be referred to as a “plough catalyst”)...”. The questions that would be raised by one of ordinary skilled in the art are:
1) Is the inventor calling the "plough catalyst" the method to activate lower alcohols by using such an activated substance? 2) Is the inventor claiming a method of activating a substance and the substances activated by the method, referring to the method of activating a lower alcohol; in the sense that the lower alcohol is the substances activated? One of ordinary skilled in the art would

have to experiment to figure out what is claimed, which renders the invention as undue experimentation. Subsequently all dependent claims are rejected as well.
